

Filtering out the Competition

QUALITY FILTER SERVICE

COST SAVINGS — Restaurant property damage caused by grease fires averages \$34 million annually. ISM can help keep you from becoming just another statistic. But even if you've never had to worry about potential property damage, consider the savings in new filter purchases, labor time, employee injury, and cleaning chemicals.

REDUCE CLEANING LABOR — With ISM taking care of your filters, employees need not worry about the dirty and dangerous task of removing filters over a hot grill and can focus on customer service. You don't have to worry anymore about half-cleaned filters or grease-related odors.

IMPROVED VENTILATION — ISM's exclusive filter design diverts more grease, allowing air flow to continue at maximum efficiency. This reduces odors caused by grease build-up and increases the efficiency of heating and air conditioning. ISM filters are designed to function in the broadest range of air flow and cooking conditions.

DESIGNED TO TRAP MORE GREASE — Manufactured exclusively for ISM, the baffle-type stamped aluminum filters are aerodynamically designed to trap more grease. They are UL listed and conform to National Fire Protection Association Code 96.

NEW FILTER WITH EVERY SERVICE — ISM routinely performs general inspections and replaces used filters with brand new ones as part of the complete service. ISM is the only national supplier to offer a new filter with every service and recycle used filters.

**QUALITY. SERVICE.
CONVENIENCE.**
